Canadian Farmers Profit From Wheat

The war's devastation of European crops has caused an unusual demand for grain from the American Continent. The people of the world must be fed and wheat near \$2 a bushel offers great profits to the farmer. Canada's invitation is therefore

Canada's invitation is therefore especially attractive. She wants settlers to make money and happy, prosperous homes for themselves by leiping her nine immense whest crops.

Yea can get a Besnesiand of 160 acres FREE and other lands at remarkably low prices. During many years Canadian whest fields have averaged 20 bushes to the acre many yields as high as 45 bushels to the acre. Wonderful crops also of Costs, Bartey and Jlaz.

Bissel farming as profitable an industry a: grain relaining The excellent grames full of nutrition are the only food r, quired for beef or dairy purposes. Good achools, churches, markets convenient, climate excellent.

There is an extra demand for far. I short to replace the many young men who have volunteered for the war. The Government is unging farmers to put extra acreage late grain. Write for literature and particulars as to reduced rallway rates to Supt. of Immigration, Ott. Canada, or Canada, and Canada.

SELF HELPS for the **NEW SOLDIER**

By a United States Army Officer (Copyright, 1917, by the Whoeler Syndicate, Inc.)

THE CHARGE.

If a company is advancing to th dring line by rushes, the captain may increase or decrease the size of the tractions he sends forward, as he sees fit, in order to complete or retard the povement. When the company forms but one unit of the firing line, it may be sent forward by a rush of the whole -just as the platoon may be similarly advanced. The captain leads the rush of the company, and platoon leaders run at full speed at the head of their respective platoons. Platoon guides follow the line to insure a prompt and orderly execution of the advance, that is, to prevent straggling or a sagging of the front.

The advance is not limited, however, to the methods described, as has already been explained. Any method may be employed which successfully brings the attack closer to the enemy. NOTHING SAID ABOUT LION Crawling, especially in surprise attacks, may be the most practicable and ef-Showman Had Forgotten to Mention fective method to be pursued.

It should be repeated here, as in the first lesson in extended order drill, that the use of the rifle is here assumed. At all events, the framework mammoth circus offered \$100 to any of extended order movements could be member of the audience who would en- tearned with broomsticks, while there fer the lion's cage. He made the in- is no method of learning the rifle itself. vitation nightly, but no one seemed in even to the fixing of the bayonet, witha hurry to accept it until one evening a out a rifle in hand.

But no consideration of extended order, combat exercise or skirmishing, would be complete without the charge. Even on an armory floor, extended order drill is usually finished off with a charge, in order to inject something of but the impresario replied, with a conthe supremely exciting element of battle into what might otherwise become mechanical plodding. "Oh! So you want to go into the

The charge is a rush—an eruption—into which all the pent-up mental and "Certainly!" said the man, starting emotional intensity of a battle may have an outlet. That, to be sure, is not "Very well, then; come along. I will open the door for you and you can the purpose of the charge, which is to expel an enemy from a given position, but it does become a vent for the otherwise suppressed excitement of battle, ward with a knowing wink. "I'll go in, and to that extent gathers in violence. Because this outburst contributes to the force of the charge a general shout is important.

The signal for the charge, sounded from the post of the commanding officer, is repeated by the musicians of all parts of the line. The company officers, both the captains and lieutenants, lead the charge—the time has now passed for direction and control and the necessities call for sheer leadership. Therefore the officers precede druff and itching with Cuticura Ointment. Next morning shampoo with their men, encountering the danger Cuticura Soap and hot water using first. The skirmishers, with fixed bayoplenty of Soap. Cultivate the use of nets, spring forward together-shout-Cuticura Soap and Ointment for every- ing-and close with the enemy.

THE PATROL.

The patrol is perhaps the most responsible and important work upon which an enlisted man may be engaged. The patrol represents the eyes of the unit—eyes like those of crabs, thrust out on long feelers, so to speak, but which are still in contact with the "The kaiser," he went on, "kicked main force and can be withdrawn to out Bethmann Hollweg, who only want- it. The use of a patrol is threefold: ed an honorable peace, and took on It is a detachment sent out from a Doctor Michaelis, who demands a command to gain information of the IS CURIOUS ROCK DWELLER pence of victory. Yes, the kaiser tries | country or of the enemy; to prevent

An erroneous impression prevails in uninformed quarters that the use of the airplane on the great scale now witnessed in Europe has dispensed with old methods of foot patrol. This is not the case. To be sure, there is no mer sense, except, perhaps, in night is now reverting, the principle of the patrol is indispensable,

The reason that the airplane cannot substitute for the foot patrol is that the nirplane is seldom able to distinguish a command behind cover or in the shelter of a forest. This fact is so well established that artillery positions have been covered with bushes and trees and the guns themselves are painted a mottled green which deceives the birdmen. There is an infinite amount of careful groping out and detailed observation left over for foot patrols, after the airplane has passed over. It is not necessary, in these articles, to consider cavalry patrol.

As for the matter of surprise, even units as small as a company, when on the firing line, must be well protected by patrols on each flank. Each leader of a flank platoon details a man to watch for the signals of the putrol or patrols on his flank. Patrols or parties posted to prevent hostile reconnaissance should relieve the main body of the necessity of betraying its position

by firing on small bodies of the enemy. "To be surprised by an enemy at short range," says the drill regulations, "is an unpardonable offense."

Therefore, reconnaissance is kept up throughout an action and it is the important duty of combat patrols to give security to exposed flanks. Whether or not the patrol is able to stop a hostile reconnaissance or even an attack, it must at all hazards convey warning of the enemy's approach to the main if caught by a fire on the flank. body. This is the more essential be-

to take care of its own front, its flanks are particularly vulnerable to modern For example, a machine gun, raking

Neither should a pa-You will look ten years younger if you darken your ugly, grizzly, gray hairs by using "La Creole" Hair Dressing —Adv. trol start forth a man short of the requisite number to make the necessary reconnaissance and insure that all important information will reach the com-

It may be necessary for patrols to fight their way to the designated point by driving off enemy patrols. If there is a prospect of such clashes, the patrel must be stronger than otherwise, and invariably provision must be made for the escape of one man to return with essential information.

While it is in general the basiness of a patrol to execute its purpose and, if possible, avoid fighting, the purpose may be of such a nature that it must be executed whether this requires fighting or not. If such be the case, as has just been said, the strength of the patrol when sent out must be fixed proportionately.

On the other hand, if the purpose is to gain information only, and of a general nature, a small patrol is better than a large one. For it moves less conspicuously and conceals itself more readily than a larger detachment. Two men are often sufficient for such work as observing from a point in plain view of the command or reconnoitering between outguards.

Whether messages are to be sent back, and how frequently, also deter-mines the strength of the patrol, and it must be large enough to furnish the probable number of messengers without reducing the patrol to less than two men. Two men are the minimum, since provision must be made against the chance that the patrol leader might be disabled.

In sending back messages, if the information is of exceptional importance, the patrol leader will commit the same message to two men who will return to the main body by different routes. The character of the information desired when the patrol is dispatched in this connection also will determine the strength of the detachment and double messengers, or a series of double messengers, will be provided.

In friendly territory, a weaker patrol may be used than for the corresponding purpose in hostile territory, since the patrol would have the assistance of friendly civilians, and would be obliged to keep a lookout for the enemy only. In a hostile territory. on the other hand, a patrol must be wary of hostile civillans as well as hostile forces, for hostile civilians will be quick to apprise the enemy of the presence of the patrol.

phon, or tongue. The pholas is in great demand at the senside resorts along the Pacific coast for its meat is very tender and makes excellent soup. The clams are dislodged in great numbers from the ledges by the use of dynamite, although it is possible to obtain them with a pick or

New Cutting Agent,

In the recent evolution of new alloys, it is interesting to note that steel is surpassed as a cutting agent by a metal containing no iron, though this element has been since the bronze age the basis of practically all working tools. The "stellite" of Elwood Haynes claims not only the durable hardness at high temperature that gives it greater results than "high-speed steel" in lathe work, but its resistance to tarnish is an added property especially fitting it for ordinary cutlery. Its peautiful color and polish are said to be quite unaffected by atmospheric conditions or acid fruits. Of its development, Mr. Haynes says that when nolybdenum is added to an alloy of cobalt with 15 per cent of chromium, the hardness gradually increases until the molybdenum reaches 40 per cent, when the product is exceedingly hard and brittle, cutting deeply into glass cause, while the firing line is obligated and easily scratching quarts. Taking a fine polish, it is so hard as to escape ordinary scratching. With 25 per cen of molybdenum, the resulting metal is fine grained, scratches glass readily npany or battalion from the flank, and takes a strong, keen edge. The alloy is too hard for forging, but it Even when the casualties are not im- can be east without difficulty.
